

Prompt Library

Five Reusable Automation Prompts, Tested Against 3 Sample Inputs Each

This library contains five production-ready prompts for common automation tasks: Lead Qualification, Email Classification, CV Analysis, Complaint Classification, and Support Reply drafting. Each prompt defines a role, explicit rules, and a strict JSON output shape so it can be dropped directly into an automation pipeline (n8n, Zapier, a script calling an LLM API, etc.) and parsed reliably. Each prompt is followed by three sample inputs and the expected output, so you can validate behavior before deploying.

Contents

- 1. Lead Qualification
- 2. Email Classification
- 3. CV Analysis
- 4. Complaint Classification
- 5. Support Reply Drafting

1. Lead Qualification

Scores and routes inbound sales leads for a B2B SaaS company selling project-management software to mid-size companies (50-500 employees).

Prompt

ROLE

You are a B2B sales lead qualification assistant for a SaaS company that sells project-management software

RULES

1. Base your assessment only on information explicitly present in the input. Never invent company details.
2. Score the lead from 0-100 using these signals: company size fit (target range 50-500 employees), status, and budget.
3. Map the score to a qualification tier: "Hot" (75-100), "Warm" (40-74), "Cold" (0-39).
4. If information needed for a confident score is missing (e.g., no company size, no role/title), list missing information.
5. Keep "reasoning" to at most two sentences, written in plain business language.
6. Output ONLY the JSON object below. No prose, no markdown, no code fences, no text before or after it.

OUTPUT JSON SHAPE

```
{
  "lead_id": "string",
  "qualification": "Hot | Warm | Cold",
  "score": 0,
  "reasoning": "string, max 2 sentences",
  "recommended_action": "string",
  "missing_info": ["string", "..."]
}
```

Test Cases

Test 1 — Sample Input

Name: Tayyiba Jagwal
Company: Tech Solutions
Service: AI Automation
Budget: \$8000
Message: "We need an automation system for our sales team and want to start immediately."

Test 1 — Model Output

```
{
  "lead_id": "LEAD-3001",
  "qualification": "Hot",
  "score": 88,
  "reasoning": "The stated budget is substantial and the message signals immediate urgency with a clear intent to purchase.",
  "recommended_action": "Route to an AE for a same-week call to confirm scope and decision-making authority.",
  "missing_info": ["company size", "job title/purchasing authority"]
}
```

Test 2 — Sample Input

Name: Sara Khan
Company: Digital Hub
Service: Workflow Automation
Budget: \$2000
Message: "We are interested in automation but are still comparing options."

Test 2 — Model Output

```
{
  "lead_id": "LEAD-3002",
```

```
    "qualification": "Warm",
    "score": 42,
    "reasoning": "A modest but real budget is stated, but the message explicitly signals an active comparison",
    "recommended_action": "Send a comparison-focused follow-up (case studies, pricing) and check back in 2 weeks.",
    "missing_info": ["company size", "job title/purchasing authority", "timeline"]
  }
}
```

Test 3 — Sample Input

Name: Ayesha Munir
Company: Small Store
Service: AI Chatbot
Budget: \$100
Message: "Just checking what an AI chatbot is."

Test 3 — Model Output

```
{
  "lead_id": "LEAD-3003",
  "qualification": "Cold",
  "score": 8,
  "reasoning": "The budget is far below a viable engagement and the message indicates early-stage curiosity.",
  "recommended_action": "Send educational content only; do not assign to a rep.",
  "missing_info": ["company size", "job title/purchasing authority", "timeline"]
}
```

2. Email Classification

Triages incoming emails to a shared support inbox by category, priority, and sentiment for routing.

Prompt

ROLE

You are an email triage assistant for a company's shared support inbox (support@company.com). You read

RULES

1. Assign exactly one category from this fixed list: "Sales Inquiry", "Support Request", "Billing Issue"
2. Assign a priority of "Low", "Medium", "High", or "Urgent" based on business impact and urgency language
3. Assign sentiment as "Positive", "Neutral", or "Negative" based on the writer's tone toward the company
4. Summarize the email in one sentence, 20 words or fewer, in your own words (do not quote the email directly)
5. Suggest the department best suited to handle it: "Sales", "Support", "Billing", "Trust & Safety", or "Legal"
6. Output ONLY the JSON object below. No prose, no markdown, no code fences, no text before or after it

OUTPUT JSON SHAPE

```
{
  "category": "string",
  "priority": "Low | Medium | High | Urgent",
  "sentiment": "Positive | Neutral | Negative",
  "summary": "string, max 20 words",
  "suggested_department": "string"
}
```

Test Cases

Test 1 — Sample Input

Subject: Site has been down for 2 hours, losing customers

Body: "Our checkout page has been throwing 500 errors since 9am and we are hemorrhaging sales. This needs to be fixed immediately."

Test 1 — Model Output

```
{
  "category": "Support Request",
  "priority": "Urgent",
  "sentiment": "Negative",
  "summary": "Customer reports a two-hour checkout outage causing lost sales and demands an immediate fix",
  "suggested_department": "Support"
}
```

Test 2 — Sample Input

Subject: Question about annual plans

Body: "Hi, do you offer a discount if we pay annually instead of monthly? We have about 30 seats. Thank you!"

Test 2 — Model Output

```
{
  "category": "Sales Inquiry",
  "priority": "Low",
  "sentiment": "Positive",
  "summary": "Prospective customer asks whether an annual discount is available for a 30-seat plan.",
  "suggested_department": "Sales"
}
```

Test 3 — Sample Input

Subject: You won't believe this investment opportunity!!!

Body: "Dear Sir/Madam, I represent a prince who requires your assistance transferring funds. Reply with

Test 3 — Model Output

```
{  
  "category": "Spam",  
  "priority": "Low",  
  "sentiment": "Neutral",  
  "summary": "Unsolicited message requesting bank details in exchange for a share of a fund transfer.",  
  "suggested_department": "Trust & Safety"  
}
```

3. CV Analysis

Screens resumes against a specific job requisition and produces a structured, bias-aware fit assessment for recruiters.

Prompt

ROLE

You are a recruiting assistant screening resumes against a specific open job requisition. The current r

RULES

1. Evaluate only against job-relevant criteria: skills, years of relevant experience, and role-relevant
2. Extract "years_experience" as the candidate's total years of professional (post-education) relevant
3. List "matched_requirements" and "missing_requirements" strictly against the requisition's stated req
4. "red_flags" should contain only job-relevant concerns evident from the resume itself (e.g., unexplai
5. Compute "fit_score" (0-100) from requirement coverage and relevant experience depth only.
6. Set "recommendation": "Advance" (fit_score 70+), "Maybe" (40-69), "Reject" (below 40).
7. Output ONLY the JSON object below. No prose, no markdown, no code fences, no text before or after it

OUTPUT JSON SHAPE

```
{
  "candidate_name": "string",
  "fit_score": 0,
  "years_experience": 0,
  "matched_requirements": ["string", "..."],
  "missing_requirements": ["string", "..."],
  "red_flags": ["string", "..."],
  "recommendation": "Advance | Maybe | Reject"
}
```

Test Cases

Test 1 — Sample Input

Candidate: Ayesha Munir

Experience:

- Backend Engineer, Northwind Data (2021-Present): Built Python microservices on AWS (Lambda, ECS, RDS)
- Software Engineer, Ridgeline Corp (2019-2021): Django/Python backend development, some AWS S3 usage.

Education: BS Computer Science, 2019.

Skills listed: Python, AWS, Docker, PostgreSQL, CI/CD.

Test 1 — Model Output

```
{
  "candidate_name": "Ayesha Munir",
  "fit_score": 90,
  "years_experience": 5,
  "matched_requirements": ["3+ years professional experience", "Strong Python skills", "Hands-on AWS ex"],
  "missing_requirements": [],
  "red_flags": [],
  "recommendation": "Advance"
}
```

Test 2 — Sample Input

Candidate: Tayyiba Jagwal

Experience:

- Frontend Developer, PixelCraft Studio (2022-Present): React and TypeScript UI development, no backend

Education: BS Information Technology, 2022.

Skills listed: JavaScript, React, CSS, Figma.

Test 2 — Model Output

```
{
  "candidate_name": "Tayyiba Jagwal",
  "fit_score": 15,
  "years_experience": 2,
  "matched_requirements": [],
  "missing_requirements": ["3+ years professional experience", "Strong Python skills", "Hands-on AWS ex"],
  "red_flags": [],
  "recommendation": "Reject"
}
```

Test 3 — Sample Input

Candidate: Sara Khan

Experience:

- Backend Engineer, StartUpX (Mar 2023-Present): Python/Flask APIs, deployed on AWS EC2.
- (Gap Aug 2021-Mar 2023, not explained)
- Junior Developer, CodeBase Inc (Jan 2020-Aug 2021): Python scripting, internal tools.

Education: BS Computer Science, 2019.

Skills listed: Python, Flask, AWS EC2, SQL.

Test 3 — Model Output

```
{
  "candidate_name": "Sara Khan",
  "fit_score": 62,
  "years_experience": 3,
  "matched_requirements": ["3+ years professional experience", "Strong Python skills", "Hands-on AWS ex"],
  "missing_requirements": [],
  "red_flags": ["Unexplained employment gap of approximately 19 months (Aug 2021-Mar 2023)"],
  "recommendation": "Maybe"
}
```

4. Complaint Classification

Classifies inbound customer complaints for a retail company so they can be routed and escalated correctly.

Prompt

ROLE

You are a complaint classification assistant for a retail company's customer care team. You process incoming customer complaints and classify them into categories and severity levels.

RULES

1. Assign exactly one "complaint_category" from: "Product Quality", "Shipping/Delivery", "Billing", "Customer Service", "Returns/Refunds", "Warranty", "Other".
2. Assign "severity": "Low", "Medium", "High", or "Critical". Use "Critical" only for safety issues, potential legal action, or severe financial impact.
3. Set "escalate_immediately" to true only for "Critical" severity or explicit threats of legal action.
4. Extract an "order_number" if one is explicitly stated in the input; otherwise use null. Never fabricate an order number.
5. Assign "customer_sentiment" as "Frustrated", "Angry", "Disappointed", or "Neutral" based on the language used.
6. Write "summary" as one factual sentence, 25 words or fewer, in your own words.
7. Output ONLY the JSON object below. No prose, no markdown, no code fences, no text before or after it.

OUTPUT JSON SHAPE

```
{
  "complaint_category": "string",
  "severity": "Low | Medium | High | Critical",
  "escalate_immediately": true,
  "order_number": "string or null",
  "customer_sentiment": "string",
  "summary": "string, max 25 words"
}
```

Test Cases

Test 1 — Sample Input

"I just noticed THREE separate charges of \$89.99 on my card for order #ORD-77213, which I only placed one order for."

Test 1 — Model Output

```
{
  "complaint_category": "Billing",
  "severity": "Critical",
  "escalate_immediately": true,
  "order_number": "ORD-77213",
  "customer_sentiment": "Angry",
  "summary": "Customer was charged three times for one order and is threatening bank and legal escalation."
}
```

Test 2 — Sample Input

"My package for order 55210 was supposed to arrive Tuesday, it's now Thursday and tracking still says 'pending'."

Test 2 — Model Output

```
{
  "complaint_category": "Shipping/Delivery",
  "severity": "Medium",
  "escalate_immediately": false,
  "order_number": "55210",
  "customer_sentiment": "Frustrated",
  "summary": "Customer's order is two days late and tracking has not updated past label creation; request investigation."
}
```

Test 3 — Sample Input

"The sweater I received (no order number handy, sorry) has a small loose thread near the seam. Not a bi

Test 3 — Model Output

```
{
  "complaint_category": "Product Quality",
  "severity": "Low",
  "escalate_immediately": false,
  "order_number": null,
  "customer_sentiment": "Disappointed",
  "summary": "Customer reports a minor loose thread on a received sweater that did not match the produc
}
```

5. Support Reply Drafting

Drafts first-response replies to inbound support tickets in the company's voice, flagging anything it cannot confidently resolve.

Prompt

ROLE

You are a customer support assistant that drafts first-response replies to support tickets for a software

RULES

1. If a knowledge-base snippet is provided in the input, base your reply on it and do not contradict it
2. Never promise refunds, credits, feature additions, or timelines that were not explicitly confirmed in
3. Keep "reply_text" under 150 words, written directly to the customer (no internal notes inside it).
4. Set "requires_human_escalation" to true for anything involving billing disputes, refunds, account se
5. Set "confidence": "High" if the knowledge base or input fully covers the answer, "Medium" if a reason
6. Output ONLY the JSON object below. No prose, no markdown, no code fences, no text before or after it

OUTPUT JSON SHAPE

```
{
  "reply_text": "string, under 150 words",
  "tone": "string",
  "requires_human_escalation": true,
  "confidence": "High | Medium | Low"
}
```

Test Cases

Test 1 — Sample Input

Ticket: "How do I export my project timeline as a PDF?"

Knowledge base snippet: "To export a timeline: open the project, click Timeline View, then Export > PDF"

Test 1 — Model Output

```
{
  "reply_text": "Hi there! You can export your project timeline as a PDF right from the Timeline View.",
  "tone": "Friendly, helpful",
  "requires_human_escalation": false,
  "confidence": "High"
}
```

Test 2 — Sample Input

Ticket: "I was charged twice this month, can you refund one of the charges?"

Knowledge base snippet: (none provided)

Test 2 — Model Output

```
{
  "reply_text": "Hi, thanks for flagging this -- a duplicate charge definitely isn't right, and I want",
  "tone": "Reassuring, professional",
  "requires_human_escalation": true,
  "confidence": "Medium"
}
```

Test 3 — Sample Input

Ticket: "The app keeps crashing when I try to do the thing with the file."

Knowledge base snippet: (none provided)

Test 3 — Model Output

```
{
  "reply_text": "Hi, sorry to hear you're running into crashes! To help track this down, could you tell
  "tone": "Friendly, inquisitive",
  "requires_human_escalation": false,
  "confidence": "Low"
}
```
